

MESOZOOIC™

FREE ADMISSION

OVERVIEW

This document contains variants and rules that you can use to add variety and new challenges to your *Mesozooic* games.

Only the *Mesozooic* base game is required to play with these rules.

TABLE OF CONTENTS

Mesozoic (solo variant)	2
Meso2oic (2-player choose variant)	4

MESOLOZOIC VARIANT

The Mesolozoic variant allows you to play **Mesozoic** as a solo player. You still build three zoos, and your goal is to score as many total points as possible.

Instead of choosing cards as normal, you assign cards to all three of your zoos simultaneously, then build a different zoo each round.

Mesolozoic follows the normal rules of **Mesozoic**, with the following changes:

SET UP

Take one director card as normal. To create the deck, shuffle together **three sets of basic cards** and the **neutral cards**. You will not use the directors of the other two sets.

Note: Instead of the neutral cards, you may choose or randomly select **eight advanced cards** to include in the deck.

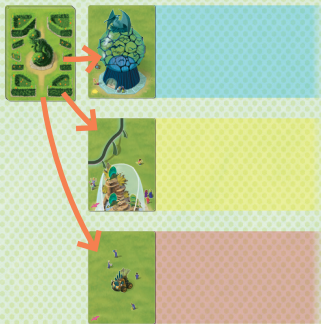

Then deal out 33 cards from the deck and return the remaining cards to the box without looking at them.

PLAYING THE GAME

Before the start of the first round, there is a **plan step** in which you assign cards to each of your three zoos simultaneously.

Plan

Draw the top three cards of the deck and place them faceup in front of you as the start of three separate rows. Each row will contain the cards for one of your zoos.

Starting 3 Rows

Then draw three more cards from the deck and assign **one card of your choice faceup to each row**. Repeat drawing and assigning until each row has 11 cards (and the deck has run out). Collect each row into a separate pile and set the piles aside. Then start the first round.

Choose

Each round, choose one of your piles of cards; you must choose a different pile each round. Resolve the build and score steps as normal using the cards in the chosen pile. Note which pile you use for each round.

End of the Round

To prepare for the next round, set aside your director card. Then set aside the cards from the zoo you just scored in a pile. Do not shuffle any cards together.

Replay Round

After the third round, replay your lowest-scoring round using the same pile as before. Keep your **higher score** with that pile.

GAME END

After you have finished replaying a round, the game ends. To determine your total, add up your scores with each pile (do not drop your lowest score).

Then compare your score to the following chart to see what visitors thought of your zoos:

0-29	Boring
30-44	Fine
45-59	Amusing
60-74	Exciting
75-89	Thrilling
90+	Amazing

MESOZOIC VARIANT

This variant is for two players only and provides a new method for players to choose the cards for their zoos. Players take turns choosing cards from a grid, and each choice affects their opponent's available options.

Set up the game for two players, using neutral or advanced cards. Play the game normally, replacing the rules for the choose step with the following:

CHOOSE

Deal 24 cards from the deck in a faceup 5x5 grid, leaving an empty space in the middle of the grid. Set aside the remaining cards facedown (10 cards if playing with neutral cards, three cards if playing with advanced cards).

5x5 grid

Randomly determine the first player. That player places their director card in the empty space of the grid. Then they choose any card next to the director (including diagonally) to keep.

There are 8 cards next to the director for the first player to choose from. They choose the card in the top-right.

Keep your chosen cards facedown; you can look at them at any time.

After choosing a card, move the director into the chosen card's space.

Move the director card.

Then the other player chooses any card next to the director's new position to keep, and moves the director into that card's space (**they do not place their own director in the grid**).

There are now 7 cards to choose from.

Alternate choosing cards this way until each player has chosen 12 cards (and the grid is empty).

If there is only one card next to the director, you must choose that card.

One possible choice.

If there are no cards next to the director, you can choose any card in the grid; move the director to that card's space as normal.

Choose any card.

As the director moves around the grid, some cards may become unreachable until the director is isolated.

After both players have chosen 12 cards, **each player chooses one card to remove from their zoo** and sets it aside facedown. Use your 11 remaining cards to build your zoo. The first player sets their director card aside as normal.

Note: For a more competitive game, players can keep their chosen cards faceup, making it easier for their opponent to see what cards they might need.

Later Rounds

In the second round, switch the first player. In the third round, the player with the lower total score is the first player. If players are tied for the lowest score total, randomly determine the first player.
