.FABIO LOPIANO.

Ragusa: a maritime republic and Mediterranean port that sees thousands of ships pass through its walled harbour. Here, in the midst of the 15th century, Ragusa is at its peak - it is the sole rival to Venice as a trading gateway between the Eastern and Western civilizations, a neutral zone where merchants from all corners of the globe come to show their wares.

But Ragusa is nothing - and was nothing - without you: the builders. By strategically building lumber mills, vineyards, towers and warehouses around and within the city, you built - and must continue to build - the foundations of wealth and commerce that will be this city's legacy...

Players are building Ragusa in the 15th century. By strategically placing buildings, they gain access to resources and produce commodities to trade for other goods and victory points. They also gain points by building walls and towers to defend the city. The winner is the player with the most victory points at the end of the game.

Setup

1. Give each player one player mat and 3 tracker beads. Place a bead on each Commodity symbol (Orange back).
2. Give players the Towers in their color and the following number of houses:
 - 2 players - see p. XX
 - 3 players - 12 houses each
 - 4 players - 10 houses each
 - 5 players - 9 houses each
3. Place the disc of each active player's colour on square zero of the scoring track.
4. Keep the resource tracker cards nearby (6 for each player).
5. Place one tracker bead on the indicated starting spaces of the three commodity value tracks on the board.
6. Shuffle the ship cards, reveal five of them and place them on the spaces indicated on the board, ship side down.
7. For each card, move the corresponding commodity value marker up (to the right) by one or two spaces according to the number of arrows (e.g. if the card has a wine symbol and two arrows, move the wine marker up twice.) Then, flip the card to the ship side.
8. Shuffle the bonus deck, and give each player three face-down. Each player must pick one and discard the other two cards face down.
9. Shuffle the discarded bonus cards back into the bonus deck. Place the two decks (Ship and Bonus) face down, near the board.
10. Randomly select a starting player.

Resources & Commodities

The game has 6 kinds of resource: Fish, Wood, Stone, Silver Ore, Grapes and Olives. Players use tracker cards to denote how many of tiles of each they have access to. The last three of those are used to produce three types of commodity: Silver, Wine and Olive Oil.

Resources are gained but not spent in *Ragusa*. Think of them like supply lines: a measure of your access to that resource. They influence how much of a commodity you can create, but do not expire when that commodity is created.

Commodities however, are finite, and once sold will be removed from your inventory.

Players track both resources and commodities on their mats. Commodities can be sold for victory points (at a variable value) or trade them for goods that are brought into *Ragusa* by ships at the bottom of the board. Each type of good is worth a fixed number of victory points, but trading them will affect the market value of commodities.

When producing commodities, move the corresponding piece right by the amount produced. When spending commodities, move the corresponding piece left. You can store up to 12 units of each commodity in your warehouse. Additional units will be wasted.

Gameplay

Players take turns, going clockwise. On their turn they place one of their houses in one of the available spots on the map (a spot is available if there is not already an house on it.)

Each spot is adjacent to three regions (hexes), and each region provides a benefit. In order to place a house on a spot, its requirements need to be fulfilled (see below.)

The icon in the centre of the space indicates which resource is available there.

Rural

Each region outside the city walls provides one resource (e.g. fish, wood, stone, etc.)

When placing a house adjacent to one of these, place a tracker card next to your player mat (or rotate / flip if there is already a card there) to indicate how many of each resource you have access to. Each card has 1-4 on each edge on one side, and 5-8 on the other. Simply ensure that the correct number is aligned with the corresponding resource on your player mat, and flip it when you go from 4 to 5 of a resource.

When you place a house next to a resource, place a tracker card next to the appropriate resource on your player board.

When you gain more of the same resource, rotate / flip the card so that the appropriate number is next to it.

Remember that resources are never spent (see p. 5) but can be traded for other resources (see p. 12)

Each city space provides a unique benefit. These are detailed on pages XX-XX.

City

Regions within the city walls have specific actions (see pages XX-XX for details.)

When the region has a clockwise arrow symbol, the player will complete the action before allowing the respective owner of each other house around the space, going clockwise, to activate the action.

Building Requirements

When placing a house, wood and / or stone is required, depending on the types of region the house is adjacent to, and the number of houses the player has on those regions already.

For each region adjacent to the spot where the new house has been placed, count the number of houses in your color (including the one that has just been placed):

- For rural regions you need to have 1 Wood +1 for each house already on that region

- For city regions you need to have 1 Stone +1 for each house already on that region.

These resources are not consumed and can be reused across regions. Rural spaces have a minimum cost of 1 wood (you start with 0) but resources that would be gained by that house may count towards this price. **Thus, your first house must be placed adjacent to a wood space.**

Some regions within the city limits have a special requirement, depicted on the top side of the area (above the banner with the name). For example in order to place a house near the Winery, access to Grapes is required.

Important!

Requirements of all 3 regions must be met in order to build, but the same resources can be re-used for 2 or more regions, and the resources provided by one region can be used to fulfill the needs of another. Note that sea regions do not require extra resources.

Example

To place a house in the highlighted space, all players would require ≥ 1 Grapes (special requirement for the Winery). In addition:

- The **Green** player would need 1 wood and 1 stone (the wood is required for the Olive grove, the stone for the two city regions. The green player has no houses nearby, so pays no extra for this spot.)
- **Yellow** would need 2 wood and 2 stone (this would be their 2nd house in each region.)
- **Blue** would need 3 wood and 2 stone (they already have 2 houses near the Olive Grove, and 1 house near the city regions.)
- **Red** would need 1 wood and 3 stone (they already have 2 houses nearby.)

City Buildings

Below is a list of buildings within the city limits, their requirements, and effects.

Winery

REQUIRES ≥ 1

For each house on the Winery, the owner of the house moves the Wine marker on their mat equal to the amount of Grapes they have access to. Example: If a player has access to 3 Grapes and 2 houses on the Winery, they would move their Wine marker 6 spaces.

Mason

NO SPECIAL REQUIREMENTS

Build 1 section of city wall by placing one wall piece between two house spots along the city limits. **Immediately gain 1 VP for the wall +1 VP for each House / Tower of your color directly adjacent to the wall.** If other houses have already been built adjacent to the Mason tile, activate them in clockwise order (following the house that has just been placed.)

Oil Press

REQUIRES ≥ 1

For each house on the Oil Press, the owner of the house moves the Oil marker on their mat equal to the amount of Olives they have access to. Example: If a player has access to 4 Olives and 2 houses on the Oil Press, they would move their Oil marker 8 spaces.

Architect

NO SPECIAL REQUIREMENTS

Build 1 tower of your colour by placing it over one of the available tower spots along the city limits. The spot may or may not be already occupied by a house. **Spots with a tower are still available for houses.** Towers contribute to scoring for city walls, both during the game and at the end. If other houses have already been built adjacent to the Architect tile, activate them in clockwise order (following the house that has just been placed.)

Silversmith

REQUIRES ≥ 1

For each house on the Silversmith, the owner moves the Silver marker on their mat equal to the amount of Silver Ore they have access to. Example: if a player has access to 3 Silver Ore and 3 houses on the Silversmith, they would move their Silver marker 9 spaces.

Fishmonger

REQUIRES ≥ 2

Each house on the Fishmonger immediately scores **1 VP per 2 Fish** available to the owner of the house at that time. Example: A player has access to **5 Fish** and has **2 houses** on the Fishmonger. Each house will score **2 VP** for a total of **4 VP**.

Important: In order to place a house on the Fishmonger, the 2 Fish must be available after spending any other Fish needed to meet the basic requirements.

Market

REQUIRES ≥1 COMMODITY

When a house is placed on the Market, the owner of each house (starting from the newly placed one going clockwise) may purchase one of the available Ship cards.

Each slot has a **base cost** (2 Wine, 2 Oil, 1 Silver, 1 Wine, or 1 Oil. Some Ships have an **additional cost** (for example, Pearls and Gems cost one additional Silver.) When purchasing Ships, the active player must have the required commodities and will spend them by moving the corresponding marker on their mat left.

Under the Ship card is a commodity with a down arrow. When the Ship is purchased, the corresponding marker on the Market Value track will be moved down. The commodity on the card does not affect the market price.

After 1 Ship is purchased, the remaining Ships to the right will slide left, and a new card will be placed on the right-most slot. Before it is placed, look at the symbol on the back of the new ship and update the market accordingly (increasing the specified commodity value by 1 / 2 according to the number of arrows on the card.)

Ship card purchased by the players will **immediately score VP equal to the number of stars** depicted on them. See p. 14 for the full list of Goods cards.

This is the cost a player must pay to take the ship in the above slot.

When a ship is bought from a space, this symbol indicates the commodity which must be moved down one space on the commodity track.

When buying a ship with this symbol, the player must also pay 1 of the specified good.

When a new ship arrives, the card back specifies which good increases in value. The number of arrows indicates the number of spaces the commodity value moves up.

Wharf

REQUIRES ≥1 COMMODITY

When a house is placed on the Wharf, each player may ship 1 unit of Wine, Oil or Silver per house they have on this space. The commodities shipped must be available on the corresponding player mat, and if they are shipped, the appropriate marker must be updated accordingly. Each commodity shipped scores VPs = the current market price of the relevant commodity.

The space that the tracker is on will indicate how many VPs the player receives for selling that commodity. On the above board, Wine will earn 2 points, Oil will earn 1, and Silver will earn 3.

Rector's Palace

NO SPECIAL REQUIREMENTS

When placing a house on the Rector's Palace, you may draw the top 2 cards from the Bonus Deck, choose 1 to keep, and return the other to the bottom of the deck. These Bonus cards will award points at the end of the game (see Appendix for the full list of cards.) **Note:** Existing houses adjacent to the Rector's Palace are not activated.

Cathedral

REQUIRES ≥1 COMMODITY

Houses on the Cathedral score points at the end of the game, each house allowing the player to score a set of 1 Silver, 1 Wine and 1 Oil at the end-game market price. **Note:** Existing houses adjacent to the Cathedral are not activated.

Fish Exchange

At any time during the game, players may exchange 2 or more Fish for another type of resource according to the following exchange rates. The exchange is permanent.

- 2 Fish = 1 Wood / 1 Grape / 1 Olive
- 3 Fish = 1 Stone
- 4 Fish = 1 Silver Ore

Important: This may happen at any time, including right after gaining the Fish and before activating a tile. Example: the same Fish gained by placing a house on the Winery may be exchanged for a Grape in order to produce more Wine. The exchange can also happen on another player's turn, e.g. when a player places an house on the Oil Press, other players that already have an house there can gain trade Fish for Olives before their house activates.

End of the Game

The game ends when all players have placed all their houses. Scoring then proceeds as follows:

City Walls

Look at each player's longest uninterrupted (i.e. each house spot between two wall pieces is empty / has a house of your colour / a tower of your colour) stretch of wall. Score 1 VP for each wall, tower and house owned by that player in that stretch.

In the picture above, the longest uninterrupted stretch of walls for **Red** extends for 10 wall pieces across 4 red houses and 3 red towers, for a total of 17 VP. The longest stretch for **Yellow** extends for 8 pieces across 3 Yellow houses and 3 yellow towers, scoring 15 VP. The longest stretch for **Blue** extends for only 4 pieces across 2 Blue houses scoring a total of 6 VP.

Cathedral

For each house on the Cathedral, players can score VPs for 1 set of 1 Silver, 1 Oil and 1 Wine at the end-game market values. Example: If at the end of the game, the values of Silver, Wine and Oil are 4, 3 and 2 respectively, a player with 2 houses on the Cathedral who still has 2 sets of commodities on their mat will score 18 VP (2 x (4+3+2)).

Important: The commodities will be still available when scoring the Bonus Cards).

Bonus Cards

Finally, each player reveals their bonus cards and adds the victory points awarded by them.

Each of these gives the player the indicated number of points for each of the relevant resource they have on their player board at the end of the game. You may swap Fish for other resources at this stage, but not after you have scored for Fish.

These cards work similarly, but refer to goods bought from ships. Any icon with a blue background indicates that it comes from a ship. For each ship of that type (such as Spices, on the far left) the player will gain the points indicated on the card.

2 points for each different type (Good) of ship the player has at the end.

2 points for each set of 1 of each Commodity at the end of the game.

1 point for every 2 points gained from Ships during the game rounded down.

1 point for each wall adjacent to one of your Houses or Towers.

1 point for every Tower you have on the board at the end of the game.

Winner

The player with most victory points wins the game. In case of a tie, look at the value of the commodities in each player's warehouse: the player with the highest value wins.

Ship Cards

There are 26 Ship cards, and 7 types of Good that ships bring (as above, Furs, Ceramics, Clothing, Spices, Silk, Pearls and Gems.) Each good is worth a different number of points (indicated by the number of stars on the left of the card). Anytime an icon has a blue background, this indicates that it is a good gained from a ship.

Gems cost an extra Silver to buy, and increase the value of Silver by 2 when they enter the board.

They are worth 5 points.

Pearls cost an extra Silver to buy, and increase the value of Silver by 2 when they enter the board.

They are worth 5 points.

Silk can cost an extra Olive Oil or an extra Wine to buy, and will increase the value of either Oil or Wine by 2 when they enter the board.

It is worth 4 points.

Clothing has no additional cost, and can increase the price of all three commodities when it enters the board.

It is worth 3 points.

Spices have no additional cost, and can increase the price of all three commodities when they enter the board.

They are worth 2 points.

Ceramics have no additional cost, and can increase the price of all three commodities when they enter the board.

They are worth 2 points.

Furs have no additional cost, and can increase the price of all three commodities when they enter the board.

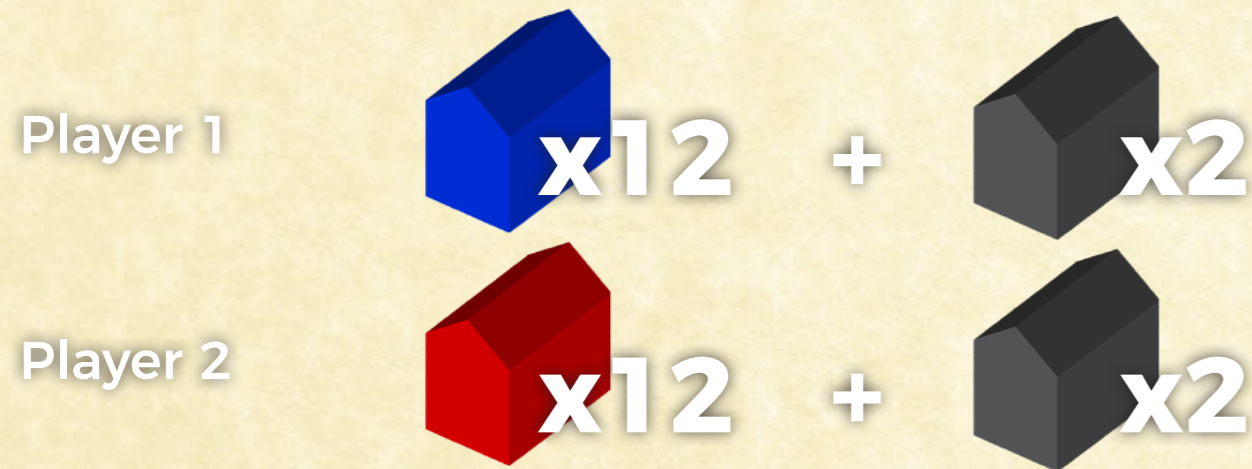

They are worth 2 points.

2-Player Rules

When playing with only one other player, play continues similarly, with one twist: as well as their regular houses, each player has 2 Powerhouses they can use to give themselves an edge.

When setting up, give one player 12 Red houses, and the other player 12 Blue houses. Then, each player takes 2 Black houses - their Powerhouses.

On any turn the players can place a Powerhouse instead of their colour, according to the following rules:

- Powerhouses can only be played along the walls (i.e. on the outer city house slots)
- There can only be one Powerhouse on a given hex (for example if a Powerhouse is placed between the Architect and the Silversmith, no other Powerhouses can be placed on those areas)
- Powerhouses don't require stone or wood to build (i.e. you can place a Powerhouse on a city area even if you already have as many houses there as you have stone)
- Powerhouses only trigger the city actions, and don't provide resources (i.e. you don't get Olive, Grapes or Fish when you place them)
- The player that places a Powerhouse will get **all the actions** from the hexes where the house was placed, regardless of the colour of the houses already placed there (i.e. if the Red player places a Powerhouse on the Wharf and there is already 1 Red and 2 Blue houses there, the Red player can sell four times and the Blue player gets no sales)
- When a regular house is placed on an area that already has a Powerhouse, the Powerhouse's activation goes to the current player, as if the house was in their colour
- When counting the longest wall, Powerhouses are counted as a third color and break walls (unless one player has also a tower on the same spot).

Solo Rules

In Ragusa, it is possible to play alone - when doing so, you will go head to head against The Patrician, a powerful aristocrat controlling Ragusa with an iron fist.

COST EFFECT COST EFFECT COST EFFECT COST EFFECT COST EFFECT

Play Example

First Turn 1

- **Red** places their first house and gains access to Wood, Stone, and Silver Ore.
- **Yellow** places their first house and gains access to the same resource types.
- **Blue** places their first house and gains access to Stone, Wood and Olives.

Second Turn 2

- **Red** places their second house - they can do so on this spot, as they now have Stone and some Silver Ore (requirements for the city spots and the Silversmith.)
By placing a house near the Silversmith, they can produce one unit of Silver.
By placing a house near the Mason, they build a Wall next to their house for 2 VP.
- **Yellow** places their second house and gains access to their second Wood, one lot of Grapes and one lot of Olives.
- **Blue** places their second house, and gains access to one lot of Grapes, gets to produce one lot of Olive Oil with the Oil Press, and activate the Mason again. They build a wall next to their house, earning 2 VP. **Red's** house is then activated again, allowing them to place another wall for another 2 VP.

Third Turn 3

- **Red** places their third house and gains access to Olives. The Winery lets them produce 1 Wine, and the Architect lets them build a tower, which they place on **T**.
- **Yellow** has access to 2 Wood, so can place their third house. They now have access to 2 Stone, 2 Silver Ore, 2 Grapes and 2 Olives.
- **Blue** places their third house, gaining access to Silver, and a 2nd set of Olives and Stone.
